KUYANAK TEST WELL NO. 1

INTRODUCTION

Kuyanak Test Well No. 1 is located on the coastal plain region of the National Petroleum Reserve in Alaska (Figure 1). The well is located 1,282 feet from the north line and 1,031 feet from the west line of protracted Section 10, Township 18 North, Range 16 West, Umiat Meridian (Latitude: $70^{\circ}55'53.48''$ North; Longitude: $156^{\circ}03'53.08''$ West). Alaska State Plane Coordinates are X = 731,554.81 and Y = 6,194,132.46, Zone 6. Mobilization of the drilling equipment and camp began on January 16, 1981. Drilling related operations started with rig-up on January 26, and were finished on March 31, 1981. Elevations were: Kelly bushing 28' and pad 11' (estimated).

The well was drilled to a total measured depth of 6,690 feet. The primary objective of the well was the Jurassic Simpson sandstone within the Kingak Formation. Secondary objectives were the underlying Sag River Sandstone and possibly the overlying Walakpa sandstone of Cretaceous age. The proposed traps were combination structural/stratigraphic in nature.

At the conclusion of the drilling operations, the well was abandoned with cement and mechanical plugs set at selected intervals.

Husky Oil NPR Operations, Inc. supervised and directed the drilling and support operations as prime contractor to the Department of the Interior, U. S. Geological Survey, Office of National Petroleum Reserve in Alaska. Nabors Alaska Drilling, Inc. was the drilling contractor; Nabors Rig 1, an Emsco A 800, was used to drill the well.

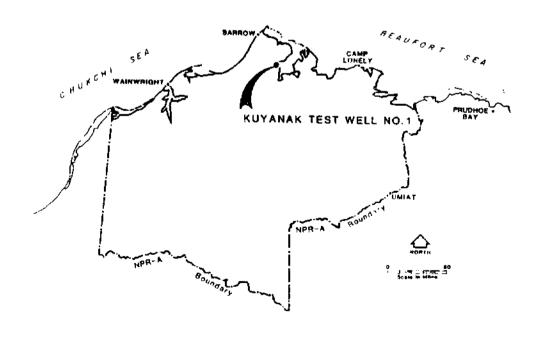

FIGURE 1 - WELL LOCATION MAP - KUYANAK NO. 1

DRILLING SUMMARY

Field operations at Kuyanak Test Well No. 1 were started on December 23, 1980, with the mobilization of construction crews and equipment required to build the drilling pad and an ice airstrip. Construction work was completed on January 22, 1981.

Rig-up operations began at Kuyanak on January 26, 1981, and continued through February 13. The well was spudded February 13, 1981, at 8:00 A 20" conductor was set at 100' and cemented with 325 sacks ArcticSet II cement. A Gel/Ben-Ex mud system weighing 9.0 to 9.7 ppg was used to a depth of 3789'. A change over to a CaCl, mud was begun at this point and essentially completed by 4205'. The change over was necessitated to prevent damage to any potential reservoirs encountered Producing reservoirs in the Barrow area are known to contain swelling clays which are hightly susceptible to fresh water. conducted by Chemical and Geological Laboratories of Alaska, Inc. and Core Laboratories, Inc. on core samples from the Upper and Lower Barrow gas sands from South Barrow Wells Nos. 12 and 13 demonstrated severe permeability damage on contact of the clays with fresh water filtrate. Permeability damage began to decrease with increased concentrations of calcium chloride greater than 25,000 ppm. Concentrations used in the Kuyanak No. 1 well varied from 28,000 to 57,000 ppm CaCl₂. Mud weights varied between 9.7 and 10.6 ppg from 3789' to total depth of 6,690 feet.

A 17-1/2" hole was drilled to 1529' (1530' Schlumberger) and then logged with DIL/GR, BHC-Sonic/GR, LSS/TTI/GR, FDC/CNL/CAL/GR, and HDT-Dipmeter.

The 13-3/8" casing was run and landed at 1521' (1515' Schlumberger) with the duplex collar at 1445' (37 joints, 72#, Buttress). The casing was cemented with 2,280 sacks of ArcticSet II mixed to a 14.8-15.2 ppg slurry with full returns. The shoe and new formation were drilled out to 1540', and the formation was tested to a 12.8 ppg equivalent gradient (260 psi surface pressure with 9.6 ppg mud).

A 12-1/4" hole was drilled to 4758' (Schlumberger). Wireline logs were run as follows: DLL/MSFL/GR, BHC-Sonic/GR, LSS/TTI/GR, HDT-Dipmeter. Thirty sidewall cores were shot and recovered.

The 9-5/8" casing was run and the shoe landed at 4755' with FOs at 1543' and 1198' (111 joints, 53.5#, S95, Buttress). The casing was cemented in two stages. The first stage at the shoe consisted of 800 sacks of 15.8 ppg Class "G" cement with 0.75% D-65 and 0.2% D-46. Good returns were obtained throughout the cementing job. The second stage of 300 sacks of 15.2 ppg ArcticSet II cement was pumped through the FO at 1198'. After the cement had set, the casing was tested to 3,000 psi. The shoe, cement and 12' of formation were drilled to 4767' and the formation tested to 0.6 fracture gradient (11.5 ppg) equivalent (250 psi surface pressure with 10.5 ppg mud).

An 8-1/2" hole was drilled to 6682'. Cores were cut as follows: Core No. 1, 4965' to 5024', recovered 58.2'; Core No. 2, 5024' to 5075', recovered 50.9'; Core No. 3, 5093' to 5153', recovered 58.4'; Core No. 4, 5153' to 5186', recovered 33'; Core No. 5, 6203' to 6236', recovered 33'; Core No. 6, 6254' to 6314', recovered 60'; and Core No. 7, 6682' to 6690' (total depth of well), recovered 7.7'.

The well was logged with the following wireline logs: Temperature Survey (Runs 1 and 2), DLL/MSFL/GR/SP, FDC/CNL/CAL/GR, BHC-Sonic/GR, HDT-Dipmeter; seventeen sidewall cores were shot with 16 recovered.

After evaluation of logs, a decision was made to plug and abandon the well. Plugs were placed in the well bore as follows: Plug No. 1, in the open hole from 6352' to 6152', 70 sacks of 15.8 ppg Class "G" cement (0.2% D-13R); Plug No. 2, in the open hole from 5200' to 5000', 115 sacks of 15.8 ppg Class "G" cement (0.2% D-13R); Plug No. 3, across the 9-5/8" shoe from 4848' to 4464', 170 sacks of 15.8 ppg Class "G" cement (0.2% D-13R). The top 2000' of the 9-5/8" annulus was displaced with diesel. This was to allow future re-entry of the upper well bore by U. S. Geological Survey personnel to take temperature measurements.

An abandonment marker was installed and the rig released on March 31, 1981, at 6:00 p.m. Nabors Rig 1 was moved to Camp Lonely and stacked out for shipment by barge to Seattle in August, 1981. Equipment belonging to Kodiak Oilfield Haulers and the Nabors Rig 1 camp were shipped to Deadhorse. Demobilization was completed on April 8, 1981.

Detailed drilling information, in the form of bit records, mud summary, time analysis, and casing and cementing reports, is included in the body of this report.

Gaseral: This form is designed for submitting a complete and correct well completion report and log on all types of initia and leases to eliber a Federal agency or a State agency, or both, pursuant to applicable Federal and/or State laws and regulations. Any necessary special instructions concerning the use of this form and the number of copies to be submitted, particularly with regard to local, area, or regional procedures and posetices, either are shown below or will be issued by, or may be obtained from, the local Federal and or State office. See instructions on items 22 and 23, and 23, below regarding separate reports for separate completions.

If not filed prior to the time this summary record is submitted, caples of all currently available logs (drillers, geologists, sample and core analysis, all types electric, etc.), formation and pressure tests, and directional surveys, should be attached hereto, to the extent required by applicable Federal and/or State laws and regulations. All attachments should be listed on this form, see item 35.

item 4: If there are no applicable State requirements, locations on Federal or Indian 12nd should be described in accordance with Federal requirements. Commit focal State or Federal office for specific instructions.

Here 18: Indicate which cleration is used as reference (where not otherwise shown) for depth measurements given in other spaces on this form and in any pitnethights. Items 12 and 24: If this well is completed for against production from more than one interval zone (smalltple completion), so state in item 22, and in item 24. Subout tog gradueing indicreal, or intervals, top(s), bottom(s) and name(s) (if any) for only the interval reported in item 33. Submit a separate report (page) on lightform, accountify itentified, for each additional interval.

them 27: "Sucks Concest": Altached supplemental response for the second showed show the details of any multiple stage comenting and the heations of the combiting time them 11: Submit a separate completion report on this form for each interval to be separately produced. (See instruction for items 22 and 24 sloops)

KUYANAK DRILL PAD NO.1

OPERATIONS HISTORY

DATE AND FOOTAGE DRILLED AS	
OF 6:00 A.M.	ACTIVITY
12/23/80	Construction camp on site, began building drilling pad and ice airstrip, construction completed January 22, 1981.
1/18/81	Two Rolligons carrying drilling camp units arrived on location at 12:30 a.m. and left at 1:00 a.m. for the return trip to Lonely. Three Herc loads were received.
1/19/8I	Rolligons were reloaded with camp units at Lonely and began the trip to Kuyanak. Two Herc loads were received.
1/20/81	Four Rolligon loads and three Herc loads were received this date. All camp units are on location. Began setting up camp.
1/21/81	Continued setting up camp. All camp units are in place except sewer plant. Expect that camp will be operational on January 23.
1/22/81	Moved four Rolligon loads. Diverted Rolligons around Admiralty Bay in order to stay off tundra with heavy loads. Received five Herc loads.
1/23/81	Received seven Herc loads and three Rolligon loads. Continued setting up camp.
1/24/81	Continued moving rig in. Camp is expected to be in full operation today.
1/25/81	Continued with rig move. Water treatment plant is not yet operational due to a broken bladder.
1/26/81	Moved the last four Rolligon loads. Two Herc loads of rig remain to be moved.
1/27/81	Rig move is complete. Several loads of support equipment are still to be moved.
1/28/81	Began rigging up subbase. Put derrick together on ground; set in master skid for pumps. Leveled and centered 20" conductor in 30" hole. Set conductor at 100' KB.

1/29/81 Finished rigging up subbase. Put draw works in shop; assembled draw-works guards. Pinned derrick to subbase and set on stand. Installed standpipe and rotary hose on derrick. Put board and crown on derrick; began rigging up elevator; set one mud tank. 1/30/81 Continued rigging up elevator; repaired draw works: set catwalk and blocks; rigged up bull line. 1/31/81 Finished repairs to draw works; finished rigging up elevator and set it. Installed draw works; set Nos. 1 and 2 engines on rig floor. Raised A-legs and pinned them in place. Worked on ice airstrip and road to camp. 2/1/81 Set up mechanics shop, supply house for rig, and electric shop. Set No. 3 motor on subbase and rigged up to compound. Set dog house on rig floor. Set Nos. 1 and 2 pumps and installed belts. Set Nos. 1, 2, and 3 mud tanks. Set fuel and water tanks. Set Nos. 1 and 2 generator houses and Nos. 1 and 2 boiler houses.

2/2/81

Hooked up steam lines; laid and hooked up fuel lines.
Rigged up and set fuel tank. Started No. 2 rig
generator. Hooked up Tioga heater; rigged up hot-air
ducts; set in suitcases. Thawed fuel lines.

2/3/81

2/4/81

2/5/81

2/6/81

Worked on boiler and steam lines. Worked on rig lights. Lined up mud pump. Finished repairing Tioga heater and started same. Set Dowell house and six cement tanks. Rig-up is approximately 51% complete.

Worked on boiler; hooked up steam and water lines. Set rig work shop, oil house, and pump house. Rigged up and repaired electrical lines and lights. Worked on air compressor and cement transfer tanks. Started No. 1 boiler; lined up mud tanks. Dowell personnel finished rigging up their equipment.

Worked on boilers; replaced damaged hose connections. Thawed out steam lines and water lines and repaired same. Repaired electrical lines and steam heater. Began rigging up derrick lights. Installed derrick lines and prepared to string them.

Rigged up mud tank and pumps. Repaired and worked on steam heater. Rigged up draw-works compound; started No. 1 engine. Finished rigging up derrick lights; strung up blocks. Worked on No. 2 boiler.

2/7/81

Raised derrick; started No. 2 engine. Rigged up mud tanks and suction lines. Rigged up rig floor and windwalls. Dowell personnel worked on cement unit.

2/8/81

Finished rigging up windwalls. Worked on steam heater and hooked it up to rig floor. Worked on mud lines and mud tank. Rigged up and dressed out rig floor.

2/9/81

Rigged up mud lines inside mud tanks; performed general rig maintenance. Finished installing windwalls. Picked up kelly and swivel; checked out mud pumps. Installed 6" diverter lines. Airstrip and road to camp are closed due to weather.

2/10/81

Cemented conductor pipe with 325 sacks cement. Welded on 20" head; tested to 750 psi. Nippled up 20" Hydril; hooked up diverter lines and flow line. Set mud logging unit. Set choke house in place. Rigged up rotary chain and guard. Worked on steam heater. Finished rigging up kelly and standpipe manifold.

2/11/81

Finished rigging up V-door and windwalls. Rigged up mud cleaner, Flo-Sho, and stroke counter. Rigged up Baroid mud logging unit and blowout preventer hydraulic lines. Repaired electric and steam heaters.

2/12/81

Dowell personnel received equipment parts and began repairing cement unit; repairs should be completed today. Finished rigging up Flo-Sho and stroke counter. Finished setting in mud cleaner. Continued rigging up Baroid mud logging unit. Set and hooked up mud tank centrifugal motors. Thawed out water line and repaired same. Began filling mud tanks with water. Rigged up Totco recorder. Began picking up bottom-hole assembly.

2/13/81

Completed picking up bottom-hole assembly. Finished rigging up Baroid mud logging unit, Tri-Flo mud cleaner, and Totco drilling recorder. Filled mud tanks with water. Began mixing spud mud. Repaired and replaced rubbers in Dresser sleeves between mud tanks. Repaired leaks in mud line; repaired leaks in steam line and heaters. Completed laying and welding diverter line; circulated and inspected pumps, mud lines, and mud system; repaired leaks. Dowell cementing unit is repaired and in good working condition.

2/14/81 217' Total Depth: 317'; Mud Weight: 9.0; Viscosity: 39. Performed miscellaneous rig-up activities. Mixed mud; tested blowout preventer to 250 psi. Mixed mud; repaired pump. Spudded well February 13, 1981, at 8.00 p.m. Flow line plugged; unplugged same and drilled ahead. Repaired leak in rig compound. Drilled; worked on fuel line; drilled.

2/15/81 1073'

TD: 1390'; MW: 9.5; Vis: 34. Drilled to 445'; picked up drilling collars. Drilled to 497'; surveyed. Drilled to 528'; surveyed. Drilled to 1025'; surveyed. Drilled to 1132'; circulated bottoms up (had drilling break from 1127' to 1132'). Drilled to 1390'; pulled out of hole for bit. Began running in hole with new bit.

2/16/81 139¹

TD: 1529'; MW: 9.7; Vis: 43. Finished running in hole with bit. Drilled to 1529'. Circulated and conditioned hole; spotted light gel pill. Surveyed. Short tripped seven stands; had 25 feet of fill. Circulated; spotted heavy gel pill. Pulled out of hole. Ran in hole with logging tool. Ran DIL/GR, BHC-Sonic/GR, LS-Sonic and FDC/CNL/GR.

2/17/81 0' TD: 1529'; MW: 9.6; Vis: 42. Reran DIL/GR; ran Dipmeter. Rigged down logging unit. Ran in hole; circulated and conditioned hole. Spotted light gel pill. Pulled out of hole to run 13-3/8" casing. Rigged up and ran 37 joints of 13-3/8", 72.0#, S-95 Buttress casing. Float shoe at 1521'; two joints of 13-3/8", 72#, S-95 Dowell duplex collar at 1445'. Rigged down casing tools; rigged up and circulated casing at 1521'.

2/18/81 0' TD: 1529'; MW: 9.7; Vis: 43. Circulated 13-3/8" casing at 1521'; rigged down 13-3/8" circulating head. Rigged up and ran in hole with Dowell duplex stinger on drill pipe. Stabbed into duplex shoe at 1445'; circulated to clear drill pipe. Cemented casing with 2,280 sacks of ArcticSet II cement; 50 barrels of water ahead; slurry weight 14.8 to 15.2 ppg. Circulated to reserve pit until 14.8 ppg slurry returns were received. Displaced drill pipe with two barrels of water and 20 barrels of mud. Left four barrels of cement in drill pipe. Float collar held; drill pipe pulled dry. Had good returns throughout job. Pulled out of hole with drill pipe and duplex stinger. Waited on cement; cut off casing and nippled up 13-3/8" National head and blowout preventers.

2/19/81 0' TD: 1529'; MW: 9.6; Vis: 35. Set slips in National head; tested to 1,500 psi; held OK. Worked on 13-3/8" x 20" head. Welded 2" packing ring. Began nippling up blowout preventer stack.

2/20/81 0' TD: 1529'; MW: 9.6; Vis: 35. Finished nippling up blowout preventer; changed out blind rams. Made up and welded choke line. Pressure tested Tri-Flo choke.

2/21/81 150' TD: 1679'; MW: 9.4; Vis: 39. Tested choke manifold and line to 5,000 psi, Hydril to 2,500 psi, pipe rams to 5,000 psi, and blind rams to 5,000 psi. Laid down 17-1/2" bit; laid down 9" Monel drill collar and 17-1/2" stabilizer. Tripped in hole with 12-1/4" bit. Tested 13-3/8" casing to 2,500 psi. Drilled float collar, cement, and shoe. Top of cement at 1439'. Drilled to 1540', tested formation to 260 psi with 9.6 ppg, equivalent to 12.8 ppg. Drilled to 1679'; circulated and pumped pill prior to trip. Began making up bottom-hole assembly.

2/22/81 1101' TD: 2780'; MW: 9.5; Vis: 34. Finished making up bottom-hole assembly; tripped in. Drilled; surveyed at 2057'. Drilled; surveyed at 2562'. Drilled ahead.

2/23/81 530' TD: 3310'; MW: 9.5; Vis: 35. Drilled; tightened pump belts. Drilled; circulated and surveyed. Pumped pill; blew down kelly. Pulled out of hole; changed bottom-hole assembly. Picked up 9" Monel drill collar and ran in hole. Cut 100 feet off drilling line. Tripped in hole; drilled ahead.

2/24/81 479' TD: 3789'; MW: 9.7; Vis: 35. Drilled; surveyed. Drilled; pumped pill and short tripped 10 stands. Drilled; surveyed. Pumped pill; blew down kelly; tripped for bit. Changing mud system to CaCl₂.

2/25/81 416' TD: 4205'; MW: 9.9; Vis: 38. Laid down five stands of drill pipe; added sub to bottom-hole assembly. Drilled ahead.

2/26/81 409' TD: 4614'; MW: 10; Vis: 41. Drilled; surveyed. Drilled; circulated for samples. Drilled.

2/27/81 101' TD: 4715'; MW: 10.1; Vis: 53. Drilled; circulated for samples. Drilled; circulated and conditioned hole in preparation for logging. Short tripped 15 stands. Washed to bottom; circulated and conditioned hole. Pulled out of hole; surveyed. Ran FDC/CNL/GR.

2/28/81 40' TD: 4755'; MW: 10.4; Vis: 95. Finished running FDC/CNL/GR: experienced tiaht hole at 3400'. Rigged down logging unit; ran in hole. Had tight hole at 3500'. Washed and reamed to bottom. Drilled to 4736'. Serviced swivel. Drilled to 4755'; circulated and conditioned hole. Pumped pill; made 15-stand short trip. Circulated and conditioned hole to log. Blew down kelly; pulled out of hole, chain out. Rigged up to log. Ran in hole with test tool to 3000'; pulled out of hole with tool.

3/1/81 0'

TD: 4755'; MW: 10.8; Vis: 85. Ran DLL/MSFL, BHC-Sonic, and Long-Space Sonic. Attempted to run Dipmeter. Opened calipers on bottom; pulled 4,500 pounds over normal weight. Stopped; closed calipers. Ran back to bottom; pulled 4,500 pounds; tool freed. Pulled out of hole; no Dipmeter log. Rigged down logging unit. Ran in hole; cut drilling line. Finished running in hole; safety reamed 60 feet. Conditioned mud and hole.

3/2/81 0'

TD: 4755'; MW: 11.4; Vis: 81. Circulated and conditioned hole. Raised mud weight to 11.4 ppg. Pumped pill; pulled out of hole, with chain out, to 1500'. Ran in hole with logging unit. Ran Dipmeter (two runs); pulled off pad on first run. Shot 30 sidewall cores; recovered 30. Rigged down logging unit; tripped in hole.

3/3/81 0' TD: 4755'; MW: 11.1; Vis: 90. Circulated and conditioned hole in preparation for running 9-5/8" casing. Surveyed; misrun. Tripped out; laid down bottom-hole assembly. Pulled wear ring and changed rams. Rigged up to run casing. Began running casing. Dropped 3" union inside casing; laid down 14 joints of casing to retrieve union. Resumed running casing.

3/4/81 0' TD: 4755'; MW: 11.1; Vis: 92. Finished running 9-5/8" casing to 4755', a total of 111 joints. Rigged up head and lines. Circulated and waited on water (road to water hole closed due to drifting snow). Rigged up and cemented with 800 sacks Class "G" cement with 0.75% D-65 and 0.2% D-46; slurry weight 15.8 ppg; yield 1.15 cubic feet per sack; water ratio 4.97/gallon. Total slurry volume: 163 barrels. Had good returns throughout cement job. Ran 50 barrels D-104 (gelled water spacer) ahead of cement; displaced with 330 barrels mud. Did not bump plug. Casing shoe at 4755'; float collar at 4667'; lower FO at 1543';

top FO at 1198'; centralizers at 4745' on joints 1, 3, 5, 7 and 9; and one centralizer above and below each FO cementer. Waited on cement.

3/5/81 0' TD: 4755'; MW: 10.9; Vis: 90. Installed emergency slips and packing assembly; tested to 5,000 psi. Nippled up blowout preventer; rebuilt drilling nipple and rigged up line from annulus to flow line.

3/6/81 0'

4755': MW: 11.2: Vis: 94. Nippled up Picked up Howco FO shifting blowout preventer. assembly; ran in hole to 1283'. Tested casing to 500 Opened upper FO at 1198' and circulated Tested FO to 2,500 annulus. Closed FO; set packer. psi. Reopened FO; established injection rate of 4 BPM at 600 psi. Pumped 10 barrels of water ahead of 300 sacks ArcticSet II, 15.2 ppg slurry; followed with two barrels water and 32 barrels mud. Top of cement at 1400'. Initial injection pressure: 800 psi at 4 BPM. Final injection pressure: 750 psi at 3 BPM. in place at 4:00 p.m. Could not release packer; shut in; held cement in place. Waited on cement; released pressure. Closed FO; tested to 500 psi. Circulated annulus for one hour. Reopened FO; circulated 9-5/8" Had approximately 20 barrels x 13-3/8" annulus. lightly contaminated mud on return. Closed FO. Tested to 3,000 psi for 30 minutes. Tripped out; laid down Howco tools. Cleared rig floor of drilling tools. Tripped in with 7-1/2" drill collars and laid down same.

3/7/81 o'

TD: 4755'; MW: 11.2; Vis: 102. Finished laying down 7-1/2" drill collars; picked up twenty-one 6-1/4" drill collars and stood in derrick. Cleaned rig floor. Tested choke manifold to 5,000 psi; tested lower kelly valve to 2,000 psi; upper kelly valve would not test.

3/8/81 12'

TD: 4767'; MW: 10.5; Vis: 45. Tested all blowout preventers to 5,000 psi; tested Hydril to 2,500 psi; upper kelly still would not test. Repaired Flo-Sho and remote control on Koomey unit. Installed bushing. Ran in hole with bit; tagged cement at 1276'. Cleaned out cement from 1276' to 1326'. hole to 4598'; tagged cement 65 feet above F.C. (4663'). Tested casing to 3,000 psi. Drilled cement from 4598' to 4726'; tested casing to 3,000 psi. Drilled from 4726' to 4755' plus 12 feet of formation to 4767'. Circulated and conditioned mud. Tested formation with 0.6 gradient, 250 psi surface pressure.

3/9/81 198' TD: 4965'; MW: 10.5; Vis: 45. Circulated and conditioned mud. Tripped out; picked up reamer, shock sub, and stabilizers. Built new bit breaker carrier. Tripped in with new bit; reamed and cleaned to 4767'. Drilled to 4965'; circulated; dropped survey. Tripped out for core barrel.

3/10/81 57' TD: 5022'; MW: 10.1; Vis: 39. Finished tripping for core barrel. Picked up core barrel and ran in hole. Reamed from 4935' to 4965'; had three feet of fill. Began cutting Core No. 1 at 4965'.

3/11/81 3'

5025'; MW: 10.1; Vis: 40. Finished cutting Core No. 1 at 5024'. Circulated and pumped pill; tripped out of hole. Laid down core; received 58.2 Made up bit, shock sub, and roto reamer on stand of drill collars. Ran in hole; took weight in of bushing. wear Laid down bottom-hole assembly. Pulled and inspected wear bushing. Reinstalled bushing. Picked up bottom-hole assembly Reamed from 4960' to 5024'; and ran in hole. circulated and conditioned mud. Tripped out for core barrel; picked up core barrel and ran in hole. Washed 30 feet to bottom. Began cutting Core No. 2.

3/12/81 50' TD: 5075'; MW: 10.2; Vis: 42. Cut Core No. 2, 5024' to 5075'. Core barrel jammed. Pumped pill; tripped out of hole. Laid down core; received 50.9 feet. Picked up bottom-hole assembly and tripped in hole.

3/13/81 78' TD: 5153'; MW: 10.3; Vis: 40. Ran in hole to shoe; slipped and cut 100 feet off drilling line. Serviced rig. Ran in hole; reamed 15 feet to bottom; no fill. Drilled from 5075' to 5093'; circulated samples. Pulled out of hole to core. Laid down bottom-hole assembly; picked up core barrel. Ran in hole with core barrel; washed from 5033' to 5093'. Cut Core No. 3, 5093' to 5153'.

3/14/81 33' TD: 5186'; MW: 10.3; Vis: 39. Circulated and pumped pill. Pulled out of hole with Core No. 3. Laid down core; recovered 58.4 feet of core. Ran in hole with core barrel; washed and reamed from 5093' to 5153'. Cut Core No. 4, 5153' to 5186'. Circulated; pumped pill; pulled out of hole. Laid down core; recovered 33 feet. Changed upper kelly valve. Picked up drilling assembly and ran in hole.

5401'; MW: 10.2; Vis: 44. Tripped in hole 3/15/81 TD: with drilling assembly. Reamed from 5086' to 5186': 215' no fill. Drilled to 5401'; circulated. Dropped survey; pulled out of hole for bit. 5553'; MW: 3/16/81 10.3: Vis: 43. Repaired rotary TD: 152' hole: chain. Tripped out of

chain. Tripped out of hole; tested blowout preventer. Tripped in hole with bit; reamed from 5341' to 5401'. Drilled from 5401' to 5485'. Repaired rotary chain. Drilled ahead.

TD: 5649'; MW: 10.5; Vis: 44. Drilled to 5649'; dropped survey. Tripped for new bit. Attempted to circulate but mud volume was too low. Tripped out to casing shoe; built mud volume.

TD: 5736'; MW: 10.2; Vis: 41. Built mud volume; lost mud through open dump gate. Tripped in hole from shoe; tight at 5100'. Reamed from 5590' to 5649'; circulated and surveyed at 5649'. Repaired mud pumps. Started out of hole to change bottom-hole assembly; after 10 stands tripped back in hole to resurvey. Circulated; surveyed at 5649'. Drilled ahead.

TD: 5867'; MW: 10.6; Vis: 39. Drilled from 5736' to 5760'. Ran out of water; blew down water lines. Drilled to 5832'. Short tripped 10 stands; no drag; had 25 feet of fill. Washed and reamed from 5772' to 5832'. Drilled to 5850'; circulated and checked for flow. Drilled ahead.

TD: 5980'; MW: 10.5; Vis: 39. Drilled to 5980'; pumped pill and dropped survey. Pulled out of hole; retrieved survey; serviced roller reamer and changed bit. Ran in hole with new bit to 5960'. Reamed to 5980'.

TD: 6152'; MW: 10.4; Vis: 47. Drilled to 6006'; circulated bottoms up. Drilled to 6134'; checked for flow; circulated samples. Drilled to 6152'; circulated; dropped survey. Pulled out of hole; changed bits. Picked up junk basket; changed jars. Ran in hole.

TD: 6219'; MW: 10.4; Vis: 39. Ran in hole with new bit; washed and reamed from 6082' to 6152'; had 20 feet of fill. Drilled to 6200'; checked for flow and circulated samples. Drilled to 6203'; checked for flow. Slugged pipe; pulled out of hole. Laid down stabilizers; picked up core barrel. Ran in hole to

3/19/81 131'

3/20/81 113'

3/21/81 172'

3/22/81 67' 4700'; cut drilling line. Ran in hole; encountered bridge at 4652'. Washed and reamed to 5740'. Ran in hole to 6162'; washed and reamed from 6162' to 6203'. Installed rotary chain. Began cutting Core No. 5.

3/23/81 35' TD: 6254'; MW: 10.4; Vis: 43. Cut Core No. 5, 6203' to 6236'. Pulled out of hole; laid down and serviced core barrel; recovered a 33' core. Tested blowout preventers. Dumped sand trap and cleaned flow lines. Ran in hole; washed and reamed from 6176' to 6236'; had 15' of fill. Drilled to 6254'. Checked for flow; circulated samples; pumped pill. Pulled out of hole, steel-line measuring; no correction. Changed bottom-hole assembly; picked up core barrel. Ran in hole for Core No. 6.

3/24/81 115' TD: 6369'; MW: 10.3; Vis: 44. Ran in hole with core barrel to 4700'. Serviced rig. Ran in hole with core barrel to 5951'; hit bridge. Washed and reamed from 5951' to 6254'; had 20 feet of fill. Circulated and dropped ball. Cut Core No. 6, 6254' to 6314'. Pulled out of hole; received 60' of core. Picked up bottom-hole assembly; ran in hole to 6234'. Washed and reamed from 6234' to 6314'; had two feet of fill. Drilled ahead.

3/25/81 196'

TD: 6565'; MW: 10.4; Vis: 39. Drilled ahead.

3/26/81 100'

TD: 6665'; MW: 10.3; Vis: 45. Pumped pill. Pulled out of hole; changed bit; cleaned junk basket and redressed reamer. Ran in hole to 6510'. Washed and reamed from 6510' to 6566'; had 12 feet of fill. Drilled to 6665'.

3/27/81 25'

TD: 6690'; MW: 10.4; Vis: 48. Drilled to 6682'; pumped pill. Pulled out of hole; changed bottom-hole assembly. Picked up core barrel; ran in hole to 6634'. Washed and reamed from 6634' to 6682'; had eight feet of fill. Dropped ball; cut Core No. 7, 6682' to 6690'. Repaired 5" drill-pipe slips. Pulled out of hole, retrieved core and laid down core barrel. Recovered 7.7 feet of core. Rigged up logging unit and ran in hole with logging tool.

3/28/81 0' TD: 6690'; MW: 10.3; Vis: 47. Attempted to run temperature survey. Could not get deeper than 5330'; laid down temperature tool. Thawed out DLL tool; ran in hole for DLL/MSFL/GR/SP log. Could not get below 6256'. Pulled out of hole, laid down tool,

rigged-down Schlumberger, ran in hole to 6643'; washed and reamed from 6643' to 6690'. Circulated and conditioned mud. Made a ten-stand short trip. Had 50,000 to 75,000 pounds drag over string weight from 6484' to 6124'. Washed and reamed from 6645' to 6690'; had 20 feet of fill. Circulated; made five-stand short trip; no drag. Circulated and spotted gel pill on bottom. Surveyed; spotted bar pill; blew down kelly. Chained out of hole to 4700'; no drag. Continued pulling out of hole. Surveyed (misrun). Rigged up logging unit. Began running Temperature Survey.

3/29/81 0' TD: 6690'; MW: 10.3; Vis: 44. The following logs were run: Temperature Survey, DLL/MSFL/GR/SP, FDC/CNL/GR, BHC-Sonic/GR, HDT-Dipmeter, and Velocity Survey.

3/30/81 0' TD: 6690'; MW: 10.3; Vis: 44. Shot 17 sidewall cores; recovered 16. Ran Temperature Survey and HDT-Dipmeter. Rigged down logging unit. Pulled wear bushing. Ran in hole with bottom-hole assembly. Pulled out of hole; laid down bottom-hole assembly. Ran in hole with open-ended drill pipe to 4700'; slipped and cut drilling line. Ran in hole to 5488'. Picked up drill pipe and ran in hole to 6352'. Thawed plug out of kelly; circulated and conditioned mud.

3/31/81

TD: 6690'; PBTD: 4464'. Spotted cement Plug No. 1 from 6352' to 6152' with 70 sacks Class "G" cement 0.2%15.8 ppg. D-13R at Circulated conditioned mud. Spotted cement Plug No. 2 from 5200' to 5000' with 115 sacks Class "G" cement plus 0.2% D-13R at 15.8 ppg. Spotted cement Plug No. 3 from 4848' to 4464' with 170 sacks Class "G" cement with 0.2% D-13R at 15.8 ppg. Pulled out of hole to 3915'; reversed out. Laid down drill pipe. CaCl₂ mud with water from 2000'. Reversed out water and changed to diesel from 2000' to the surface to allow the well to be used in the USGS's North Slope geothermal measurements program. Finished laying down drill pipe and kelly. Nippled down blowout preventers and cleaned mud pits.

4/1/81

TD: 6690'; PBTD: 4464'. Finished nippling down blowout preventers; nippled up abandonment valves and marker. Finished cleaning mud pits. Released rig March 31, 1981, at 6:00 p.m. Began rigging down and moving rig and material from location.

INTRODUCTION

After the 1976 drilling season, casing requirements were reviewed and design of casing strings standardized. Every effort was made to minimize weight and grade changes for simplicity, cost effectiveness, and to reduce chances of error during handling and running operations. Casing sizes were selected to accommodate designs for wells from 2,000' to 20,000'. Steel grade selection was the controlling factor on design with low hardness (Rockwell C24-28) steel being selected for Arctic application and possible H₂S environment. Below is listed casing sizes and design criteria required by Husky:

			STRENGTH SI)		MUM PRE QUIREME (PSI)	
SIZE (1)	<u>WEIGHT</u>	MIN.	MAX.	COLLAPSE	BURST	CONNECTION
20"	133#/ft.	55,000	80,000	1,500	3,050	STC
13-3/8"(2)	72#/ft.	95,000	110,000	3,450	5,350	ВТС
9-5/8"(3)	53.5#/ft.	95,000	110,000	8,850	7,900	втс
9-3/4" ⁽³⁾ 7"	59.2#/ft. 38#/ft.	95,000 95,000	110,000 110,000	9,750 12,600	8,540 9,200	BTC BTC

- OD tolerance to be within API requirements unless adjustment absolutely necessary to meet 1D requirements.
- (2) Special drift to 12.25".
- (3) Special drift to 8.50".

The following are additional requirements primarily to assure that the steel exhibits the metallurgical properties for Arctic applications and resistance to hydrogen embrittlement.

- 1. All pipe that is 13-3/8" OD and smaller to be quenched and tempered.
- 2. Run Charpy "V" notch tests on two random samples per 50 tons per heat. Minimum acceptance of 15 ft.-lb.@-50°F. Furnish test reports with order.
- 3. Perform all testing normally required for API approved pipe.
- 4. Furnish test reports for ladle analysis, quantitative analysis, and all check tests as per API requirements.

In addition, the following handling requirements were made:

- 1. Collars must be of same steel grade as pipe body.
- 2. Apply an API modified thread compound on mill-installed collar before bucking on.

- 3. Inspect at mill using Tuboscope's Amalog IV or equivalent on 9-3/4" and smaller, and at least magnetic particle on 13-3/8" and 20". All pipe to have special and area inspection together with full length API drifting. (Note special drifting requirements.)
- 4. Apply Arctic grade grease on all connections before installing thread protectors.
- 5. Install closed-end type thread protectors. Plastic plugs can be used to secure wrench openings in protectors.
- 6. Buck up thread protectors with impact wrench. Both mill and third party inspection personnel should observe the installation of thread protectors.
- 7. Palletize or containerize the tubulars, if possible, prior to shipment from mill. Do not haul pipe like cordwood in gondola railroad cars.
- 8. All pipe to be Range 3.
- 9. No "V" notching or metal stenciling on pipe body or collars.

Casing programmed for Kuyanak Test Well No. 1 was as follows: 20" conductor at ± 100 '; 13-3/8" at ± 1500 '; 9-5/8" at ± 4825 '; and a 7" liner from 4825' to a total depth of 6800' if needed for formation evaluation. Actual casing run was 20" conductor at 100'; 13-3/8" at 1521'; and 9-5/8" at 4755'. The 7" liner was not required.

The upper 2000' of the 9-5/8" annulus was filled with diesel when the well was abandoned. This was to allow future re-entry into the upper well bore by U. S. Geological Survey personnel to take temperature measurements.

Inches Slacked Off 4
Remarks:

RIG INVENTORY

Draw Works

Emsco A 800, Serial No. 11, grooved for 1-1/4" line. Equipped with 46" Parkersburg hydromatic brake, sand line drum, and Emsco air operated catheads.

Rig Drive

Emsco A 83 sectional compound; Serial No. 11.

Engines

Three Caterpillars, D379, turbocharged diesel engines, Serial Nos. 68B 1724, 68B 1725, and 68B 1726.

Pumps

Oilwell A1000P, Serial No. P-117-34.

National K 700 with National forged steel fluid end.

Substructure

Lee C. Moore Corporation, 15' high, 23' wide, 52' long.

Mast

Lee C. Moore Corporation 136', Serial No. T3119. Equipped with Lee C. Moore kit. Hook load with 12 lines, 600,000 lbs.

Blocks

Emsco RA-44-5, Serial No. 45.

Swivel

Emsco L 400, Serial No. 14T.

Rotary Table

26" Oilwell.

Tongs

BJ, type DB.

Accumulator

Koomey, Model T-201603S, 3,000 lb. w.p.

Blowout Preventers

One - 13-5/8", 5,000 lb. Hydril, Serial No. 3588.

One - 13-5/8", 5,000 lb. Shaffer LWS double.

Boilers

Two Kewanee, 100 HP, Scotch Marine boilers with Kewanee oil burners.

Mud Tanks

No. 1: 35' long, 9' 6" wide, 6' 10" high, mud tank complete with insulated cover.

No. 2: 38' 10" long, 9' 6" wide, 6' 10" high, mud tank with insulated cover.

No. 3: 32' long, 9' 6" wide, 6' 10" high, mud tank with insulated cover.

Degasser

Clark Gas Hog.

Desander

Pioneer, 10 cone.

Desilter

Swaco, 8 cone.

Overshots

One 10-5/8" Bowen, maximum catch 9".

One 8" Bowen, maximum catch 6-3/4".

Water-Fuel Tanks

One combination water/fuel tank; capacity 400 lbs. water, 8,000 gallons fuel.

Two upright water tanks; capacity 400 lbs.

Drill Collars

Twenty-one 7-3/4" O.D., 2-7/8" I.D. drill collars, 6-5/8" H90 connections.

Twenty-one 6-1/4" O.D., 2-7/8" I.D. drill collars, 4-1/2" H90 connections.

Drill Pipe

Ninety joints, 5", 19.5 lb., Grade G; 5", 19.5 lb., Grade E as needed.

Air Heater

One Tioga, 4,200,000 BTU air heater.

Generator

Two Caterpillars, D353, 200 KW generator sets and required distribution system.
